Site Features

1. Entrance/Manor House/Gift Shop - with beds featuring alpine plants and the heath family.
2. Winter Interest - shrubs and herbaceous perennials provide flowers, fruits and texture to brighten the cold, dark days of winter.
3. Moist Coniferous Woods - a stroll through this section of forest typical of western Oregon has native spring ephemerals such as *Erythronium* and *Synthyris*.
4. *Berberidaceae* - commonly known as the barberry family, this section displays the beautiful flowers, leaves, and a variety of forms within one family of plants.
5. Physic Garden - shade tolerant plants with medicinal properties are grown in honor of the herb bed established by John Leach.
6. Woodland Lilies - the prevalent shade of the conifer forest is ideal for many species such as *Polygonatum*, *Lilium*, and *Smilacina*.
7. Nursery/Compost Display - numerous beds and containers feature plants from alpine and high desert settings. Fuchsias and pacific northwest shrubs surround various compost units.
8. Historic Leach Collection - wander the trails to view features such as camellias, southeastern U.S. natives, and pacific northwest trillium.
9. Rock Garden - this sunny slope and its plants emulate alpine and dry regions of western North America.
10. East Terrace - the most formal area of the Garden has a stone centerpiece, brick patio, and arbors. A twisted hawthorn tree overlooks the terrace, while hydrangeas, dogwoods, and climbing vines add interest.
11. Riparian Zone - Johnson Creek provides a dynamic accompaniment to an extensive fern collection, native shrubs and stately trees.
12. Stone Cabin - this quaint and sturdy structure built in 1931 provided a summer retreat for the Leaches and their friends. Several redwoods grow nearby.
13. Dry Coniferous Woods - features include plants of Curry County, Oregon and pacific northwest trillium blooms in spring.
